

Ziel

Ein Stripdown von Jeromes JP-HB-Devices-addon nur für die folgende 3 Projekte/Geräte:

- HB-Dis-EP-42BW
- HB-RC-12-EP
- HB-OU-MP3-LED

Warum?

Ich habe vollstes Vertrauen in Jeromes Modifikationen und Patches für seine vielen Selbstbau-Projekte!

Da ich zur Zeit nur wenige davon aktiv einsetze und ich andererseits gern das Gefühl hätte, noch ungefähr zu wissen was man beim AddOn tun muss und außerdem unabhängig von Jeromes AddOn sein möchte falls er mal den Support für neuere Versionen der RM/CCU Firmware einstellen *sollte* hätte ich gern ein Strip-down des JP-HB-Devices-addon nur für meine aktiven Projekte.

Legende

Schwarz brauche ich nicht

Rot brauche ich

Cyan davon habe ich bereits mod., eigene Versionen (vom 4,2 ePaper Strip-down AddOn 2019)

~~Markiert Hier interessiert mich besonders welche ich für die 3 Projekte brauche und welche ich weglassen kann~~

Mein neuer Plan zu den Patch-Dateien (.patch)

Im Gegensatz zu meinem alten 4,2 ePaper Strip-down aus 2019 würde ich dieses mal aus Zeit- und Effizienzgründen nicht einzelne Sachen aus den Patch-Dateien entfernen.

Soll heißen ganz oder gar nicht - wenn eine bestimmte .patch Datei für eines der 3 Ziel-Projekte gebraucht wird dann bleibt sie und es wird alles darin gepatcht, egal ob auch Patches für andere jpl12sdl Projekte mit drin sind oder nicht.

Falls eine bestimmte .patch Datei für keines der 3 Ziel-Projekte gebraucht wird wird sie natürlich weggelassen.
